

Archil Lelashvili – NUID 001522269
 Program Structures & Algorithms, Spring 2021
 Assignment No 2

Task:

1. We are to implement three methods of a class called Timer. Please see the skeleton class that I created in the repository. Timer is invoked from a class called Benchmark_Timer which implements the Benchmark interface. To check the implementation the unit tests **BenchmarkTest** and **TimerTest** are used.
2. Implement InsertionSort (in the InsertionSort class) by simply looking up the insertion code used by Arrays.sort. You should use the helper.swap method although you could also just copy that from the same source code. You should of course run the unit tests in **InsertionSortTest**.
3. Implement a main program (or you could do it via your own unit tests) to actually run the following benchmarks: measure the running times of this sort, using four different initial array ordering situations: **random**, **ordered**, **partially-ordered** and **reverse-ordered**. I suggest that your arrays to be sorted are of type Integer. Use the doubling method for choosing n and test for at least five values of n. Draw any conclusions from your observations regarding the order of growth.

Output:

P.1 & P.2 were implemented as required. Please the unit tests below.

For P.3 – a new class is implanted:

test -> java -> edu.neu.coe.info6205 -> sort -> simple -> CustomBenchmarks.class

It runs the InsertionSort for arrays starting with size of 2^4 (16 elements) up to 2^{15} (32k elements) under four different scenarios with random, ordered, partially-ordered and reverse-ordered arrays. The simulations run for 100 times each. We use Excel to show the output in a table and a chart.

| N | Total time with InsertionSort | | | | Time per Element (multiplied by 1000) | | | | Growth | | | |
|-------|-------------------------------|-----------|----------|-----------|---------------------------------------|-----------|--------|-----------|---------|-----------|--------|-----------|
| | Already | Partially | Random | Backwards | Already | Partially | Random | Backwards | Already | Partially | Random | Backwards |

Total time with InsertionSort

Time per Element

Relationship Conclusion:

We can see that the time spent **per element** in worst case scenario **increases linearly** and looks like in worst case scenario we are getting $O(N^2)$ complexity. Even though with Random and Partially sorted arrays we have slower growth, it is still far from constant.

Unit Test Results:

```
Run: TimerTest
Tests passed: 10 of 10 tests - 2 s 726 ms
TimerTest (edu.neu.coe.info6205.ut) 2 s 726 ms
  testPauseAndLapResume0 304 ms
  testPauseAndLapResume1 327 ms
  testLap 218 ms
  testPause 218 ms
  testStop 110 ms
  testMillisecs 110 ms
  testRepeat1 245 ms
  testRepeat2 310 ms
  testRepeat3 777 ms
  testPauseAndLap 107 ms
Process finished with exit code 0
```

```
Run: BenchmarkTest
Tests passed: 2 of 2 tests - 1 s 823 ms
BenchmarkTest (edu.neu.coe.info62) 1 s 823 ms
  testWaitPeriods 1 s 823 ms
  getWarmupRuns 0 ms
2021-02-03 19:18:14 INFO Benchmark_Timer - Begin run: testWaitPeriods with 2 runs
Process finished with exit code 0
```

```
Run: InsertionSortTest
Tests passed: 4 of 4 tests - 155 ms
InsertionSortTest (edu.neu.coe.info620) 155 ms
  testMutatingInsertionSort 5 ms
